A word of advice to anyone visiting Mark Linkous' house for the first time: Watch out for the horses. There are two of them in the field out back, and they don’t always keep to themselves. Recently, when Musician was chatting with Linkous on the phone to get a progress report on his band Sparklehorse’s second album, he interrupted his own sentence to observe laconically, “Oh, one of my horses is coming in.” Right into the house? “Yeah.” Might that not present a problem? Linkous considered the question for a moment, then answered, “No, as long as he doesn’t eat my breakfast.”

Between the horses, three dogs, and two cats, it’s amazing that Mark gets much work done. Yet work he does, principally in the home studio he’s set up in the second-story double bedroom of his rented farmhouse in rural Virginia. Four tracks on Sparklehorse’s *Vivadixiesubmarinetransmissionplot* (Capitol), were recorded in this room, which Linkous has dubbed Static King. This time around, Linkous wants to do the whole album here; at press time, he’s about half done, and so far he’s succeeded in his aim.

The four homebrewed tracks on *Vivadixie* were recorded on a TASCAM Portastudio 688 eight-track cassette machine that Linkous had borrowed from Cracker’s David Lowery. But last year, with the help of some advance money from his record company, Linkous purchased a TASCAM DA-88 and DA-38, giving him a total of 16 digital tracks to work with. He also acquired a TASCAM MT-30 MkII DAT machine for mixdown purposes, and a Mackie CR 1604 console.

ULTIMATE SOUND MACHINES

HOME STUDIO PRESENTED BY
T.C. ELECTRONIC*
Among Static King’s other tape machines are a Marantz portable cassette deck, which is used principally for field recordings; these often end up in the Akai S900 sampler for further manipulation. A recent country fair gave Mark plenty of sampling fodder: “They had a bunch of old steam-powered tractors and farm machinery there. I recorded them on the Marantz, then brought the tape home, sampled it, and used the sounds to build percussion tracks.”

Linkous’ studio is also home to several relatively familiar keyboards, including a Casio SK-1 (not shown) and a Yamaha Portasound PSS-480, which runs a Roland Dr. Synth module, and an ancient Casio he bought at a thrift shop for fifty cents.

Far more exotic is an ancient Gibson Vanguard guitar amp (not shown), with a belt-driven echo unit mounted on the back. “That amp belonged to a preacher; I got it at an auction that a guy had in his trailer. The echo unit’s called the Adineko Memory System, made by a company called Tel-Ray Electronics. You can put your finger on the wheel and manually slow down the echo—sounds beautiful. I told a buddy at a music store about it, and he’d heard of them, and he told me that I should never open up this round metal canister that’s attached to it because there’s some sort of toxic material inside.” Apparently, good tone can literally be deadly.

Static King’s other amps are more commonplace: a new purple Vox AC30, two Sixties Ampegs—a Reverberocket and a Gemini IV—a Sears Silvertone 2x12, and a Boss Mascot MA-1, used mainly for vocals. Linkous’ guitars, which also didn’t make it into our photo, include a 1960 Gibson ES 330, a late-Seventies ES 335, and a Fender Squier Strat. His bass is also a Fender Squier, while for acoustic guitar tracks he switches to a Forties Gibson Southerner. Rounding out the guitar gear are a Dunlop RotoVibe and Boss PN-2 Tremolo/Pan, Turbo Overdrive, and Analog Delay pedals; another recent acquisition is a DOD VoFex vocal effects processor. For percussives, Linkous generally makes do with an Alesis SR-16 drum machine, but at the moment, sets of Gretsch acoustic and Roland electronic drums occupy the studio floor for the ongoing album sessions.

The rest of Linkous’ studio setup is fairly basic. Outboard gear consists of a Furman PL-8 power conditioner, three Alesis units—a 3630 compressor, a QuadraVerb, and a MidiVerb—along with an ADA Ampulator. A Hafler Transnova P-3000 is the power amp of choice, a set of Yamaha NS-10Ms serve as the main monitors, and a TL Audio VIL eight-channel tube interface keeps the tracks sounding warm. “I think it’s only intended to be used for tracking, but I like to use it twice, to sort of squash things.”

The Static King mic collection includes two Shure SM57s, an Audix OM-1, and an AKG C414, along with countless “shitty mics,” found at various gun shows, trailer-park auctions, and landfills.

And the violin? It’s an old German instrument,” Linkous deadpans. “I bought it for $20 out of the trunk of a crack dealer’s car. In a blizzard. Really!”
